

ICACSDF 2026 International Conference on Advances in Cyber Security and Digital Forensics 11–12 September 2026, UPES Dehradun

Session Title: Secure Processing and Protection of Visual and Audio Media

About the Session

The rapid proliferation of digital multimedia content spanning images, videos, and audio has transformed communication, entertainment, and information sharing. However, it has also introduced significant security and trust challenges, including unauthorized manipulation, deepfakes, data breaches, and intellectual property violations. Ensuring the integrity, authenticity, and confidentiality of multimedia data is now a critical research priority. This special session aims to bring together researchers and practitioners working at the intersection of artificial intelligence, multimedia security, and digital forensics. The session will explore advanced techniques for secure processing, robust protection, and reliable forensic analysis of visual and audio media in diverse and potentially adversarial environments.

Topics of Interest (not limited to)

- AI-driven multimedia forensics and content authentication.
- Deepfake detection and synthetic media analysis.
- Watermarking, steganography, and fingerprinting techniques.
- Secure multimedia transmission and encryption methods.
- Adversarial attacks and defenses in multimedia systems.
- Privacy-preserving multimedia processing
- Blockchain and distributed ledger technologies for media integrity.
- Biometric security using audio and visual data
- Explainable AI for multimedia security and forensics.
- Real-time and edge-based multimedia protection systems.

Call for Papers

We invite researchers, academicians, and industry professionals to submit original research papers to this special issue.

Important Date

Paper submission deadline

30 June 2026

Paper submitted under this session will only be counted for the special session
All papers will undergo the standard peer-review process.

Session Organizers

Shelza Dua is presently working as a research associate in the Department of Electrical Engineering at NIT Kurukshetra, India. Her research interests include chaos based cryptography and image encryption.

Nidhi Chakravarty is presently working as an assistant professor in the Department of Computer Science and Engineering at Thapar Institute of Engineering and Technology, Patiala, India. Her research interests include image and speech processing, and chaos based cryptography.

Mohit Dua is presently working as an assistant professor in the Department of Computer Engineering at NIT Kurukshetra, India. His research interests include speech processing, chaos-based cryptography, information security, theory of formal languages, statistical modelling and natural language processing.
